

Radio Security Centralized Surveillance System for Real Estate RS-202

Security system REEF STRING-202 is best suited for centralized surveillance of geographically dispersed stationary sites within average city range (e.g., offices, shopping outlets, apartment blocs, cottages, etc.). Security and Fire Alarms are transmitted from sites to the Central Switch via a free dedicated radio channel operating for distances **up to 150 km without retranslation**. The latter is a unique feature offered exclusively by the BUG BALT company, the appointed Distributor of ALTONIKA, the Russian manufacturer of the RS Security Systems family of remote radio surveillance solutions.

REEF STRING-202 System does not require licensing or registration with the State Communications Control Committee of the Russian Federation.

REEF STRING-202 System supports Ademco ContactID protocol and is compatible with all switching and surveillance devices supporting ContactID (Ademco, Caddix, DSC, Bolid, etc.)

RS-202 central Control Panel supports automatic transmission checks with all switched devices with the frequency of every 4 to 12 minutes.

Up to 12 independent RS-202 Systems may operate in one geographic zone. RS-202 Control Panel (RS-202 CP) can link up to 600 Transmitters. One Transmitter supports 63 bands (Chapters) with the capacity of 999 Zones or Users within each Chapter.
